## **North Course Renovation Project**

We are very excited to begin the North Course Renovation Project under the close direction of the Tom Fazio Design team. The Fazio Design team, Colony 9 (owners of Forest Creek Golf Club) and the Forest Creek executive staff have worked diligently on the master plan for this project. The scope of work will consist of the following:

### **Putting Green Conversion**

Converting to Champion Bermuda grass, which is a premium ultra-dwarf Bermuda grass for the Pinehurst climate

### **Bunkers/Waste Areas**

Recontouring edges, adding adequate drainage and adding proper level of native sand

### **Short Game Area**

Re-design chipping area to include; larger green with Champion Bermuda grass, relocation of bunkers and additional hitting area for mid-range wedge shots

### **Turf Conditions**

Adding base-line drainage and catch basins throughout the course, as well as double aerifying fairways and tees

### **Cart Paths**

Replace with the more natural sand-like surface or asphalt where needed

May 29, 2019

**Hole #1**

A 1/2" layer is being removed from all putting green surfaces, but the surrounds and approaches will have up to six inches removed. This process, along with the upcoming fumigation, will ensure the new putting surface is clear of any contamination. The approaches will be sand capped and receive new sod, which will allow golf shots to more easily release onto the green.

**Hole #18**

Greenside bunker surrounds will be recontoured and re-sodded. Once the putting surfaces are complete, the bunkers will receive new drainage and sand.

**Holes #2 & 3**

**Hole #3**

A small waste area left of the fairway is being removed. Similar areas that are typically out of play and require extensive maintenance after a rain event, will be reduced in size or eliminated.
