**Hole #6**

The fairway bunker on #6 is now complete. The McDonald & Sons crew has completed all the major projects throughout the course. The next few weeks will be spent cleaning around the edges and getting all areas ready for a great fall golf season.

**Hole #1**

Tee boxes that remain wet and spongy after a hard rain have received another round of aerification. This helps reduce the organic layer, which in turn will allow for faster drainage. Aerification and top dressing will be a common practice during our off-season months.

**Hole #12**

The entire golf course was heavily fertilized last week. The fertilizer along with the hot humid weather will make the Bermudagrass fairways and roughs grow to be very full and lush.
